

Operating System	1.21
Von Neumann Architecture	1.26
Kernel, Middleware, System programs	1.24
I/O	1.29
Interrupt	1.32
Storage, Memory	
HDD, NVM, Cache, DRAM, EEPROM	1.34
Locality, Caching	1.38
DMA	1.42
Multiprocessor	
(asymmetric, symmetric-SMP)	1.45
Multicore	1.41
NUMA-Non-uniform memory access	1.48
Multiprogramming	
Timesharing	1.50
Virtualization	

Virtual machine manager VMM/hypervisor	1.51
CLI-Command Line interface	2.8
GUI-Graphical user interface	2.10
RTE-run-time environment	2.19
API-Application Program interface	2.15
System call parameter passing	2.20
Linkers, Loaders,DLLs(dynamic linked lib)	2.33
Protection	2.35
Implementation	2.38
Operating System Structure	
Monolithic	2.39
Modular Design(eg. Layered)	2.44
Microkernel	2.47
LKM-Loadable kernel modules	2.51

Process(code, PC, stack, data, heap)	3.5
argc, argv	3.8
Process State	3.9
PCB-Process/task Control Block	3.10
Thread	3.11
Process Scheduling	3.14
Schedulers	3.17
context switch	3.19
Dual mode operation(user, kernel)	3.21
PID, Child/Parent process	3.27
fork(), clone()	3.27
COW-Copy on write	3.39
Termination	3.40
IPC-Interprocess communication	3.44
Bounded Buffer, producer, consumer	3.47
Synchronization	3.56
Pipes(1写0读), ordinary/named	3.58
Sockets, RPC	3.63

Threads	
Multicore	4.8
Concurrency/Parallelism	4.9
Amdahl's Law	4.12
Multithreaded	4.14
TCB, thread	4.15
Lifecycle图	4.17
User/kernel T, pthread	4.22
PCS-Process-contention scope	4.22
exec()	4.25
Signals-同/异步	4.29
Signal handler	4.30
Signal cancellation 异步/deferred!	4.32
win-E/Kthread/TEB	4.36
Linux-tasks, clone()	4.37

CPU/process/shortT scheduler	5.4
CPU Scheduling	5.6
Dispatcher	5.7
FCFS-1stcome1stserved	5.10
Convoy effect(FCFS)	5.11
RR-有抢占的fcfs+time quantum	5.12
SJF-shortest Job First (min Twait)	5.17
SRTF-最短剩余时间(抢占)	5.19
Starvation	5.25
Priority=1最大	
MLQ-Multilevel queue	5.28
MLFQ-wiz feedback	5.31
PCS-process_contention_scope	
SCS-system_c_s	
Asymmetric multiprocessing	5.38
SMP-symmetric	5.39
CMT/hyperthreading	5.42
Processor Affinity(soft/hard)	5.45
Load balancing	5.46
Rate Monotonic scheduling	5.49
EDF	5.51
Little's Formula	5.57

Race condition	6.9
Critical Section	6.9
Mutual exclusion, bounded waiting	6.11
Synchronization tools	6.13
atomic hardware instructions	6.14
Mutex Locks	6.22
Semaphore	6.24
Deadlock&starvation	6.28
